

Khalil Lamharchi

☎ + (33) 679-029-060 | ✉ khalillamharchi20@gmail.com | 🔗 linkedin.com/in/khalillamharchi | 📍 Nice, France

Software Engineer with 3 years of experience building and maintaining production software, primarily with Java, Spring Boot, and Python. Experienced across the full software development lifecycle, from backend services and APIs to deployment, monitoring, and production support. I hold a Master of Science in Cloud Computing Data Infrastructure from ENSIMAG, with hands-on experience in Kubernetes, Docker, Terraform, GCP, CI/CD, and observability. I enjoy solving complex problems, learning new technologies quickly, and taking ownership from design to delivery while keeping systems reliable and maintainable.

Education

École Nationale Supérieure d'Informatique et de Mathématiques Appliquées (ENSIMAG)	2025 – 2026
M.Sc. Cloud Computing & Data Infrastructure (MoSIG)	Grenoble, France
Institut National des Postes et Télécommunications (INPT)	2019 – 2022
State Engineering Degree — Software Engineering	Rabat, Morocco
CPGE Lycée Omar Ibn Abdelaziz	2017 – 2019
Technologie et Sciences Industrielles (TSI)	Oujda, Morocco

Professional Experience

Amadeus France — Software Engineering Intern	Feb. 2026 – Aug. 2026 / Nice, France
- Designed and delivered a reusable Python automation library built on Playwright, exposing high-level keywords for seamless Robot Framework integration — enabling QA teams to write automated end-to-end UI tests. - Implemented cascading merge workflows (develop → release → main) with automated semantic versioning and conventional-commit via GitHub Actions. - Automated library packaging and publishing to the company's Artifactory PyPI registry; set up automated documentation generation and deployment on each release using libdoc.	
Berexia — Client: SCOR — Senior Software Engineer	Apr. 2024 – Jul. 2025 / Casablanca, Morocco
- Developed new features and resolved critical production bugs on a Spring Boot (Java) / SQL Server platform with an 8 years legacy codebase. - Worked on a Spring Batch backend built around multi-threaded job/task architecture for intensive calculation workloads. - Deployments triggered via a Jenkins script; each production release generate a tag in Git before delivery; all infrastructure managed on Azure DevOps.	
Berexia — Software Engineer	Sep. 2023 – Apr. 2024 / Casablanca, Morocco
- Developed a notification microservice using Flask and WebSockets to enable real-time message exchange between application components. - Developed an AI-powered reporting microservice using Flask capable of analyzing PPT, DOCX, DOC, PDF, and TXT documents and generating customized content from user-provided templates. - Integrated KrakenD API Gateway for microservice communication, with authentication and authorization managed through Okta. - Built dynamic and responsive Angular UIs using Angular Material and Ant Design. - Designed and implemented a CI/CD pipeline with GitHub Actions and Docker for continuous deployment to AWS EC2, using Nginx as a reverse proxy to secure backend services, restrict direct access, and enable HTTPS/TLS encryption.	
Berexia — Client: SCR — Software Engineer	Sep. 2022 – Nov. 2024 / Casablanca, Morocco
Designed and built from scratch a full microservices web platform; reverse-engineered legacy Excel/VBA macros to decode complex algorithmic business logic and re-implemented it across Flask(Python) (computation services) and Spring Boot (Java) (Authentication & Access control services) microservices. - Applied JWT authentication and role-based access control (Spring Boot); built dynamic React UIs (MUI, Recharts, React Datasheet Grid); . - Containerized the full application with Docker and automated the delivery pipeline using Docker Compose; deployed on AWS EC2 via GitHub Actions.	

Projects

Scalable Microservices Platform with Observability (GKE)	2025 – 2026
- Designed and delivered a scalable microservices architecture on Google Kubernetes Engine (GKE); optimized resource allocation for high performance and availability under load. - Built a full observability stack with Prometheus and Grafana HPA/VPA autoscaling and progressive rollouts. - Automated infrastructure provisioning with Terraform and deployment with canary release.	

Technical Skills

Programming & Scripting: Python, Java, JavaScript, TypeScript, Bash, C/C++

Web Frameworks: React, Angular, Spring Boot, Flask, Express.js (Node.js)

Systems & OS: Linux/Unix

Infrastructure-as-Code: Terraform, Ansible

Container Orchestration: Kubernetes (EKS, GKE), Docker

Observability & Monitoring: Prometheus, Grafana

CI/CD & Automation: GitHub Actions, GitLab CI

Cloud Platforms: AWS, GCP, Azure
